

Workstation

Functionally and ergonomically a perfect complement to the Zünd G3 cutter, the workstation offers secure storage for modules, cutting tools, and other accessories, adding to the user-friendliness of G3.

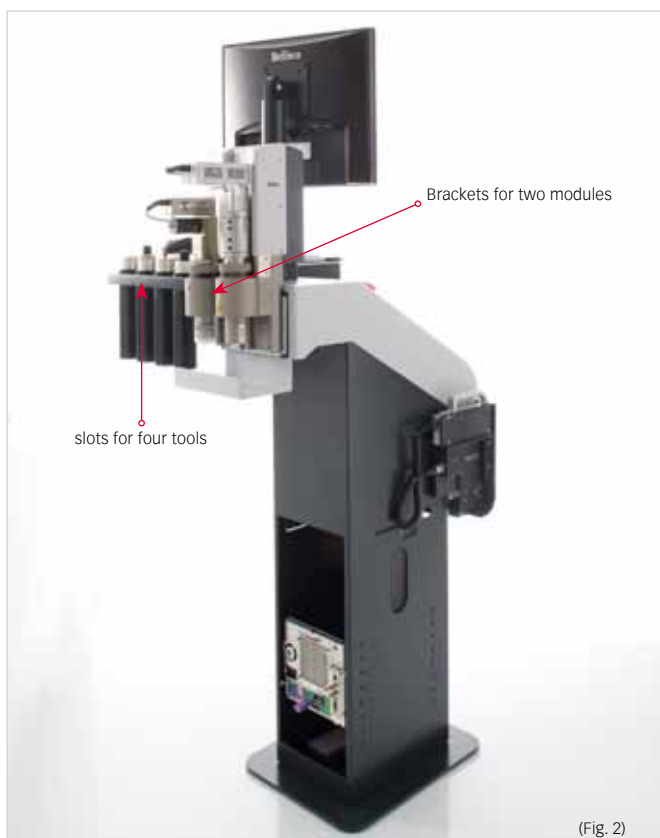

As standard delivery, Zünd G3 cutters are supplied with a control panel that includes storage for two tools. (see Fig. 1) Basic machine functions can be controlled from this control panel via firmware.

As optional upgrade, a user-friendly workstation is available that provides space for the computer, monitor, and keyboard/mouse. The monitor arm swivels for maximum viewing comfort. A cabinet at the base of the workstation accommodates the computer

and limits its exposure to dust and physical damage. In addition, the workstation offers frame holders for two tool modules as well as four slots for inserts such as the EOT, POT, DRT, etc. The workstation also includes ergonomically designed spaces for the keyboard and mouse, as well as a drawer for spare knives/bits and other necessities. (see Figs 2 and 3)
